

1. INTRODUCTION

Thank you for purchasing SilverMagic projection screen!

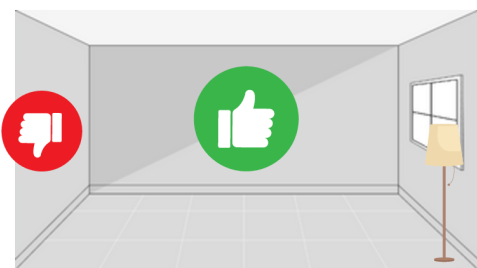

How SliverMagic retro-reflective screens work

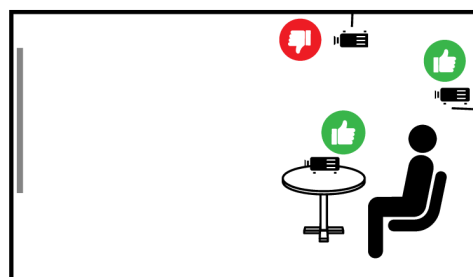

Our screens are designed to reflect light more intensely back to its source than in other directions. This design offers two key advantages:

- 1 Enhanced Contrast:** By reflecting ambient light back towards its source, our screens significantly reduce the impact of ambient light on the viewing experience.
- 2 Increased Brightness:** Our screens reflect more light from the projector back to the the area near it. As a result, viewers near the projector will experience a notably brighter image.

Tips for getting a better image

- 1** When choosing the location for the screen, please avoid placing it directly toward windows or other sources of bright light.

- 2** Position the projector close to viewers' eye level. you can place it on a coffee table, mounting on the wall behind a sofa or bed. Ceiling mounting and side projection are not recommended.

- 3** If you have any questions, or your setup doesn't meet your expectations, don't hesitate to visit product support and get help from our screen experts!

2. INSTALLATION GUIDE

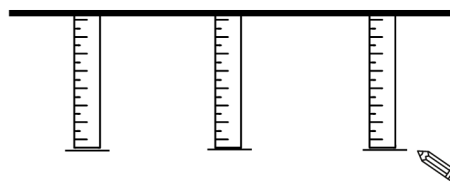

IOLIEO

With a bit of patience, you can build a perfectly flat and smooth screen!

Preparation

1 Find the desired installation spot. Avoid placing it directly toward windows or other sources of light.

2 Use a pencil to mark several reference lines at the top edge, ensuring they are the same distance from the ceiling.

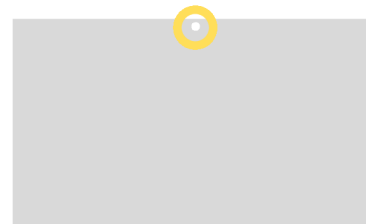

for drywall

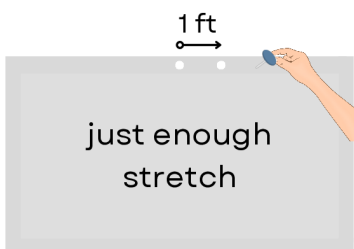

for harder surfaces

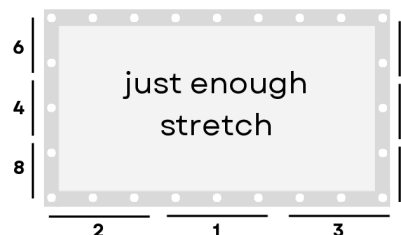

3 Select the right hardware

4 Start with middle of the top border, hang the screen on the wall using a thumbtack or nail.

5 From center to corners, fix one nail per foot while stretching the screen. Use **just enough** strength to **make the top border straight**.

6

- Follow the **order** above to install the other borders. (from center to corner)
- While stretching the screen, use **just enough** strength to **remove the wrinkles** without stretching too hard to **avoid curving the border too much**.

7 Apply the black velvet as borders. Stretch the velvet to make it straight.
